

Notes to standalone financial statements for the year ended March 31, 2018

1. Corporate Information

UPL Limited (the Company) is a public company domiciled in India and is incorporated under the provisions of the companies act applicable in India. Its shares are listed on two recognised stock exchanges in India. The registered office of the company is located at 3-11, G.I.D.C., Vapi, Dist- Valsad, Gujarat.

The Company is principally engaged in the business of agrochemicals, industrial chemicals, chemical intermediates, speciality chemicals and production and sale of field crops and vegetable seeds.

The standalone financial statements were authorised for issue in accordance with the resolution of the directors on April 27, 2018.

2.1 Basis of Preparation

The standalone financial statements of the Company have been prepared in accordance with Indian Accounting Standards (Ind AS) notified under the Companies (Indian Accounting Standards) Rules, 2015 notified under section 133 of the Companies Act 2013 ("the Act") as amended thereafter and other relevant provision of the Act.

The standalone financial statements have been prepared on an accrual basis and under the historical cost convention, except for the following assets and liabilities which have been measured at fair value:

- Derivative financial instruments
- Certain financial assets and liabilities measured at fair value (refer accounting policy regarding financial instruments),

The standalone financial statements are presented in Indian Rupees ('INR') or ('₹') which is also the Company's functional currency and all values are rounded to the nearest crores, except when otherwise indicated. Wherever an amount is represented as ₹'0' (zero) it construes a value less than rupees fifty lakhs.

Significant accounting estimates, assumptions and judgements

The preparation of the Company's standalone financial statements requires management to make estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities, and the accompanying disclosures, and the disclosure of contingent liabilities. Uncertainty about these assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of assets or liabilities effected in future periods.

Estimates and assumptions

The key assumptions concerning the future and other key sources of estimation uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year, are described below. The Company based its assumptions and estimates on parameters available when the standalone financial statements were prepared. Existing circumstances and assumptions about future developments, however, may change due to market changes or circumstances arising that are beyond the control of the Company. Such changes are reflected in the assumptions when they occur.

Taxes

There are many transactions and calculations undertaken during the ordinary course of business for which the ultimate tax determination is uncertain. Where the final tax outcome of these matters is different from the amounts initially recorded, such differences will impact the current and deferred tax provisions in the period in which the tax determination is made. The assessment of probability involves estimation of a number of factors including future taxable income.

Defined benefit plans (gratuity benefits)

A liability in respect of defined benefit plans is recognised in the balance sheet, and is measured as the present value of the defined benefit obligation at the reporting date less the fair value of the plan's assets. The present value of the defined benefit obligation is based on expected future payments at the reporting date, calculated annually by independent actuaries. Consideration is given to expected future salary levels, experience of employee departures and periods of service. Refer note 33 for details of the key assumptions used in determining the accounting for these plans.

Fair value measurement of financial instruments

When the fair values of financial assets and financial liabilities recorded in the balance sheet cannot be measured based on quoted prices in active markets, their fair value is measured using valuation techniques including the DCF model. The inputs to these models are taken from observable markets where possible, but where this is not feasible, a degree of judgement is required in establishing fair values. Judgements include considerations of inputs such as liquidity risk, credit risk and volatility. Changes in assumptions about these factors could affect the reported fair value of financial instruments. See Note 39 and 40 for further disclosures.
